

DIGITALLY TRUSTED NATIONS

From Digital Identity to Digital Trust,
the Whole-of-Nation Approach

the  **MyTRUST** way

Digital ID has Evolved – Adoption Hasn't

Identity has evolved over the decades—from paper to smart cards, and now to mobile digital IDs. Despite this progress, adoption among citizens and service providers remains only moderate at best. The gap is no longer technological—it is foundational: a persistent Trust deficit driven by limited use cases, fragmented ecosystems, and integration barriers.

The need of the hour is a deliberate shift toward Trust as infrastructure through Whole-of-Nation approach where Trust is intentionally designed, embedded, and operationalised across the ecosystem.

“Digitally TRUSTED Nations” - Blueprint for Trust Worthy Digital Economies

Six Pillars of “Digitally Trusted Nations”

A Digitally TRUSTED Nation (DTN) is a sovereign, national-scale transformation framework where trust is engineered as core infrastructure—anchored in verifiable digital identity, legally enforceable digital transactions, consent-driven data exchange and ultimately service delivery excellence.

It represents a shift from fragmented digital initiatives to a unified trust fabric that underpins every interaction across government, economy, and society.

A comprehensive multipronged national approach is necessary to achieve Trust at Scale.

Our MyTRUST Platform forms core of the Technology strategy towards transforming a nation into “Digitally Trusted Nation”.

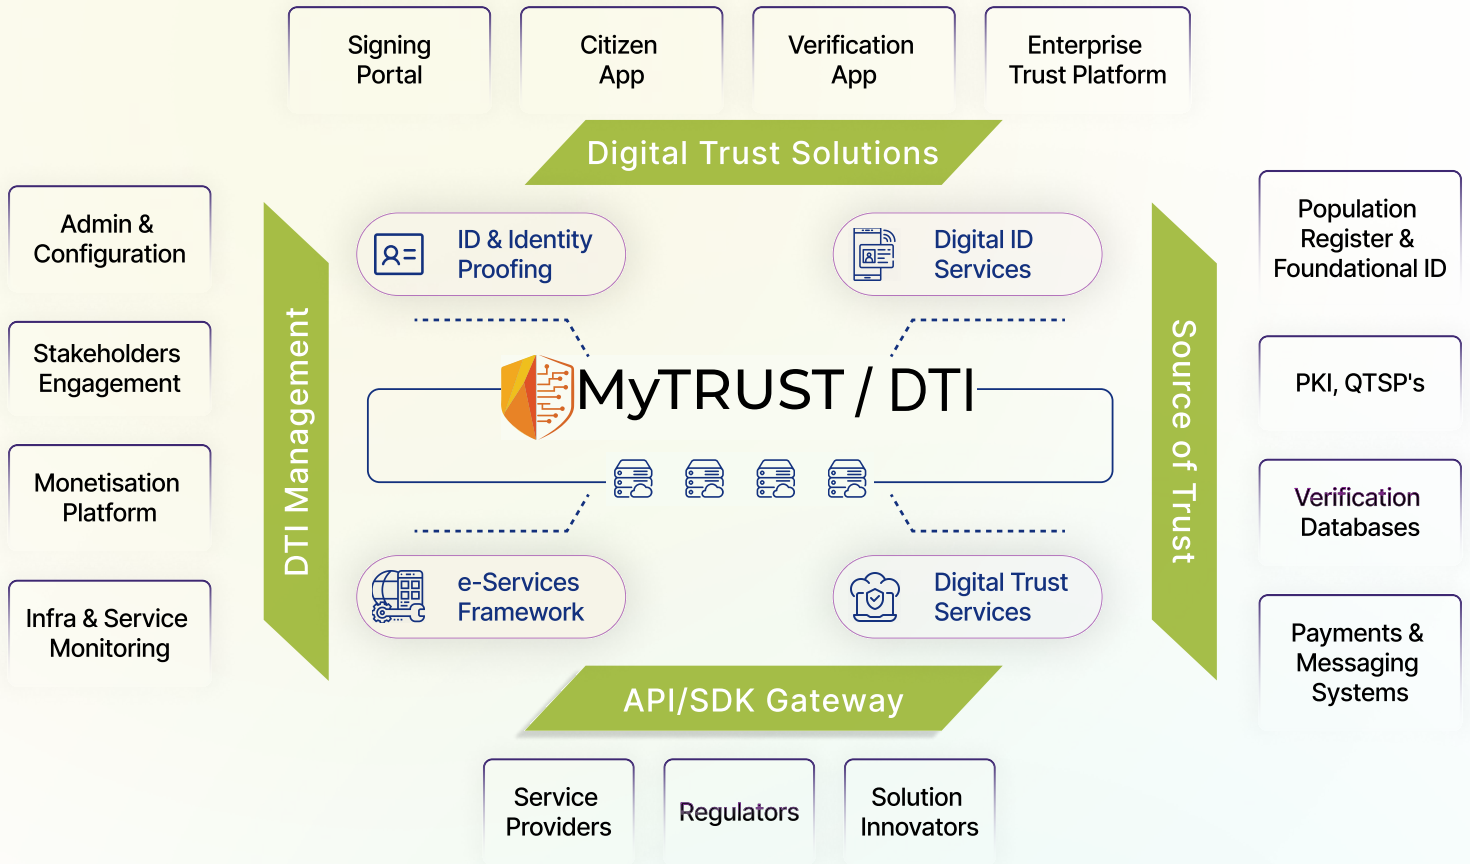

MyTRUST Platform- Enabling “Digitally Trusted Nations”

MyTRUST is not a system, it is a comprehensive national trust architecture built around principles of DPI which enables a legally valid Trust framework between citizens, businesses, and government. It comprises of:

- MyTRUST Digital Trust Infrastructure
- MyTRUST Solutions

MyTRUST Digital Trust Infrastructure (DTI)

MyTRUST DTI is the foundational stack that embeds Trust into every digital interaction- verifying identities, authenticating people, enforcing legal validity, and enabling consent-based data exchange. Built as a shared national infrastructure, it ensures every transaction, credential, and service is secure, interoperable, and continuously validated.

MyTRUST Solutions

The application layer that translates DTI into real-world impact. These are the comprehensive suite of ready-to-deploy services to use across stakeholders- Governments, Citizens, Service Providers and Relying Parties.

Modular and interoperable by design; they integrate seamlessly with existing systems (business, tech) and scale nationally. They accelerate Digital ID adoption while ensuring privacy, compliance, and user control.

Together, they accelerate the shift to seamless, trusted, fully digital services.

-  Digital Signing Portal And App
-  Citizen App
-  Verification App
-  Enterprise Trust Platform
-  KYC & Onboarding
-  Credentials Wallet- Business & Citizen
-  National Authenticator - SSO

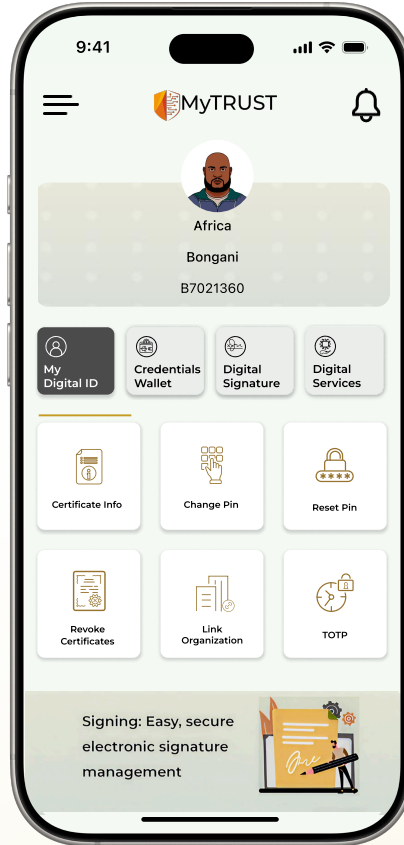

MyTRUST Platform- Whole of a Nation, **Impact Use Cases**

Use Cases

- ID & Identity Verification
- Credential Issuance (Licenses, Certificates, Documents Etc)
- Credential Verification (Offline & Online)
- Document Signing
Power Of Attorney & Delegation
- Business Wallet
- Digital Travel Credentials
- Mobile Driving License
- Authentication & SSO

..And More

Sectors

- Government & Citizen Services
- Social Benefit Delivery
- Healthcare
- Transport & Travel
- Judiciary & Enforcement
- Financial Services
- Telecom
- Education & Workforce
- Enterprises & Digital Economy

..And More

Our Strategic Engagement Model with Nations

We partner with nations to co-design, build, and sustain digital trust ecosystems- through a strategic partnership approach ensuring low initial investment & sustainable digital id programme

Longterm Partnership Approach

Launch-Scale-Sustain- Impact

Centre Of Excellence

Capacity and Knowledge Building, Use Cases Adoption

Sustainable Model

Initial Low Investment and Revenue From Services

SUCCESS STORIES

Uganda

Kenya

Middle East Country

Is your nation ready to become **DIGITALLY TRUSTED?**
